## 2015 Child Gun Deaths

February 2017

### **A child or teen dies from a gun every 3 hours and 8 minutes.**

- 2,799 children and teens died from guns in the United States in 2015, one every 3 hours and 8 minutes.
- The children and teens who died from guns in 2015 would fill 139 classrooms of 20 children.
- As shocked as the nation was by the 2012 Newtown massacre, more children and teens died from guns every three days in 2015 than died then.

### **2015 marked the greatest number of child and teen gun deaths since 2008.**

- 2014 reversed a seven-year trend of declining child and teen gun deaths, with 80 more children and teens being killed by guns than in 2013. 2015 continued that disturbing trend with 274 additional children and teens being killed than in 2014.
- The number and rate of children and teens killed by guns in 2015 are higher than for any other year since 2008.

### **Guns killed more children under 5 in 2015 than law enforcement officers in the line of duty.**

- 87 children under 5 died from guns in 2015, compared to 40 law enforcement officers killed by guns in the line of duty.

### **Black and American Indian/Alaska Native children and teens are disproportionately more likely to die from a gun.**

- In 2015, 42 percent of gun deaths were among Black children and teens, although they made up only 14 percent of all children and teens.
- 1,182 Black children and teens were killed by guns in 2015, one every seven hours and 25 minutes.
- Black children and teens were nearly four times as likely to die from a gun as White children and teens and nearly 12 times as likely to die from a gun as Asian and Pacific Islander children and teens.
- Black children and teens were the most likely of all racial and ethnic groups to die from a gun homicide. American Indian and Alaska Native children and teens were the most likely to die from a gun suicide, followed by White children and teens.
- American Indian/Alaska Native children and teens were nearly three times as likely to die from a gun as White children and teens, and nearly eight times as likely to die from a gun as Asian and Pacific Islander children.

### **Child and teen gun death rates remain higher than in the early 1960s.**

- In 2015, the rate of gun deaths among children and teens was 29 percent higher than in 1963, when data were first collected from all states.
- Between 1963 and 2015, 64,612 Black children and teens have been killed by guns — more than 16 times the recorded lynchings of Black people of all ages in the 74 years from 1877 to 1950.
- While Black children and teens have been disproportionately more likely to die from guns since the early 1960s, over half the deaths since 1963 were among White children and teens.
- On average 3,390 children and teens — 169 classrooms of 20 children — were killed by guns every year from 1963 to 2015.

**Since 1963, over three times more children and teens died from guns on American soil than U.S. soldiers were killed by hostiles in wars abroad.**

- 179,702 children and teens died from guns on American soil between 1963 and 2015, while 52,971 U.S. soldiers were killed by hostiles in the Vietnam, Persian Gulf, Afghanistan, and Iraq wars during that same period.

**The U.S. has as many guns as people.**

- The U.S. accounts for less than 5 percent of the global population, but owns an estimated 35 to 50 percent of all civilian-owned guns in the world.
- The most recent estimate of U.S. civilian gun ownership is as high as 310 million, about one gun per person. In contrast, U.S. military and law enforcement agencies possess approximately 4 million guns.
- American companies manufacture enough bullets each year to fire 31 rounds into every one of our citizens.

**A gun in the home increases the risk of homicide, suicide and accidental death.**

- A gun in the home makes the likelihood of homicide three times higher, suicide three to five times higher, and accidental death four times higher. For each time a gun in the home injures or kills in self-defense, there are 11 completed and attempted gun suicides, seven criminal assaults and homicides with a gun, and four unintentional shooting deaths or injuries.
- More than half of youths who committed suicide with a gun obtained the gun from their home, usually a parent's gun.

Note: Gun injury data are not yet available for 2015.
