## EDUCATION

## 67 <br> \%

THE PERCENT OF ALL PUBLIC SCHOOL EIGHTH GRADERS UNABLE TO READ AT GRADE LEVEL

Public education has been a crucial pathway out of poverty for families for generations, offering children opportunities to gain the social, economic, cultural and political capital necessary to realize their full potential, support their future families and give back to society. However, with fewer high-quality early childhood opportunities, poor children and children of color often begin school behind their peers. With inequitable resources, including less access to high-quality teachers and programming, they continue to fall further behind as they age.

- Less than half of poor children are ready for school at age 5 compared with 75 percent of their wealthier peers. ${ }^{1}$
- More than 75 percent of lower-income fourth and eighth grade public school students could not read or compute at grade level in 2015 compared with less than 55 percent of higher-income students (see Table 21).
- More than 73 percent of fourth and eighth grade Black and Hispanic public school students could not read or compute at grade level in 2015 compared with less than 60 percent of White students (see Tables 22-23).
- Less than 80 percent of Black, Hispanic and American Indian/Alaska Native public school students graduated on time during the 2014-2015 school year compared with 87 percent of White students (see Table 24).

Hostile school climates and exclusionary discipline practices disproportionately deny children of color the opportunity for success and contribute to the school-to-prison pipeline.

- During the 2011-2012 school year, the suspension rate for Black students in public elementary school was more than five times that for White students (see Table 25).
- The suspension rate for Black students in public secondary school was more than three times that for White students (see Table 26).

Children who are homeless, in foster care or returning from juvenile detention are also likely to be educationally disadvantaged.

- A youth who experiences homelessness is 87 percent more likely to drop out of school. ${ }^{2}$
- Students in foster care are more likely to be suspended or expelled, score lower on standardized tests in reading and math, be involved in special education, have higher rates of grade retention and drop out, and less likely to attend and graduate from college. ${ }^{3}$
- Youths in juvenile justice facilities are chronically behind in school and make no meaningful progress in academic achievement while incarcerated. Approximately 2 in 3 drop out of school after exiting the juvenile justice system. ${ }^{4}$

Children denied educational opportunities and/or pushed into the school-to-prison pipeline are less likely to graduate from high school, move on to college or other post-secondary opportunities, obtain a well-paying job, or provide their children with the high-quality early childhood experiences needed to build a strong foundation for their future. They are also more likely to have children at young ages and be incarcerated as adults, trapping them into an intergenerational cycle of poverty.

One positive step in the right direction for homeless children, children in foster care and those returned from juvenile detention was the Every Student Succeeds Act passed in late 2015, which challenges school officials to create and implement reforms for these vulnerable students. We must also shift our national spending priorities given the U.S. spent more than two times as much per prisoner as per public school student during 2011-2012 (see Table 27).

## America's Schools Remain Segregated by Race, Ethnicity and Income

It has been more than 60 years since the Supreme Court ruled school segregation unconstitutional in Brown v. Board of Education but children across the country, particularly low-income, Black and Hispanic children, still lack equal access to a quality education. As the country has grown more diverse our schools have grown more segregated and far too many Black and Hispanic students are trapped in schools isolated by race and poverty.

- Seventeen percent of students attend schools where the majority of students are Black or Hispanic and live in poverty. The number of students attending schools in which at least 75 percent of children are both eligible for free or reduced-price lunch and Black or Hispanic more than doubled from 4.1 to 8.4 million students between the 2000-2001 and 2013-2014 school years. ${ }^{5}$
- Nearly 70 percent of students were poor in schools attended by Black and Hispanic children compared with 40 percent of students in schools attended by White children.
- Students in segregated schools are disproportionately subject to exclusionary discipline. During the 2011-2012 school year, 12 percent of students were in schools with a high percent of low-income, Black and Hispanic students; but they represented 22 percent of all students suspended and 16 percent of all those expelled that school year. 6

# In 2015, the percent of lower-income fourth and eighth grade public school students performing below grade level in reading and math was almost two times that of higher-income students. 

## Table 21: Percent of Fourth and Eighth Grade Public School Students Performing below Grade Level in Reading and Math by Income Status, 2015

Notes: Lower-income students are students who qualify for free and reduced-price school lunch, which means their families' incomes are at or below 185 percent of the Federal Poverty Level (FPL). Higher-income students are students who do not qualify, or whose families' incomes are higher than 185 percent of the FPL. "Below grade level" means below proficient.

In 2015, more than 60 percent of public school fourth graders performed below grade level in reading and math.

The U.S. spent more than two times as much per prisoner as per public school student during 2011-2012.

Table 27: Public Spending on Prisoners vs. Public School Students, 2011-2012
$\left.\begin{array}{lcccc} & & & \begin{array}{c}\text { Ratio of Spending per } \\ \text { Prisoner vs. Public } \\ \text { School Student }\end{array} & \text { Rank by Ratio }^{\text {Spending per Public }} \\ \text { School Student }\end{array}\right)$

[^4]
[^0]:    ${ }^{a}$ States are ranked 1-50 from lowest to highest percent below grade level. States with different ranks may have same percents due to rounding.
    Note: "Below grade level" means below proficient. " $\mathrm{n} / \mathrm{a}$ " means reporting standards were not met and sample size was insufficient to generate a reliable estimate. Racial categories (White, Black, Asian/Pacific Islander, American Indian/Alaska Native) exclude children of Hispanic ethnicity. Hispanic children can be of any race. Pacific Islander includes Native Hawaiian. Results are not shown for students of two or more races

[^2]:    ${ }^{\text {a }}$ States are ranked 1 to 50 from highest to lowest adjusted cohort graduation rate (ACGR).
    Notes: The ACGR is an estimate of the percent of public school students who receive a regular diploma within four years of entering ninth grade. Racial categories (White, Black, Asian/Native Hawaiian/Other Pacific Islander, American Indian/Alaska Native) exclude children of Hispanic ethnicity. Hispanic children can be of any race. " S " means data were suppressed to protect the confidentiality of individual student data. The greater than or equal to sign " $\geq$ " means the estimate has been top-coded to protect the confidentiality of individual student data.
